No. 172 State of Texas—Department of Agriculture

Official Nursery Inspection Certificate

This is to certify that the Nursery Stock grown exhibited or held for sale by Hans Peterson Nursery, at Chocolate Bayou, County of Brazoria, State of Texas, has been inspected by a duly authorized Inspector of this Department in accordance with the provisions of the Orchard and Nursery Inspection Laws of the State of Texas, and was found to be apparently free from Dangerously Injurious Insect Pests and Plant Diseases.

A printed copy of this certificate on any shipping tag attached to any shipment of Nursery Stock is authority to any freight or express agent in Texas to accept same for transportation.

This certificate is void after September 1, 1930,

Austin, Texas, August 16th, 1929.

J. S. WOODARD,
Chief Inspector of Orchards and Nurseries.

Approved: GEO. B. TERRELL,
Commissioner of Agriculture.

CHOCOLATE BAYOU, TEXAS

HOW TO ORDER

TERMS AND GENERAL INFORMATION

Care of Trees on Arrival

If not ready to plant on arrival, unpack without exposing the roots to cold or air, dig a trench and heel-in carefully covering the roots with earth and give a watering. Trees thus treated can remain in the trenches until ready for planting in the orchard.

Order Now

Do not wait until you are ready to plant. Frequently orders sent late in the season cannot be filled full. Send us your order now. It will be carefully filed until you want it shipped.

Acknowledgement of Order

The day your order is received we send you receipt for the money you send.

The day the stock is shipped we notify you.

FREE PACKING

We box and pack all shipments without charge, in contrast to the extra and uncertain charges made by most firms for this work. All orders are put up in boxes or bales, the stock is packed in moss or fiber, or sawdust, and packages are all lined with heavy paper to guard against freezing or drying out.

Guarantees

A guarantee is good, only as the men behind it. Our guarantee is backed by a good name and reputation. We guarantee our stock to be true to name, high in quality, good healthy stock, free from disease. We hereby agree on proper proof to replace such stock as may prove untrue to the name under which it is sold or to refund the purchase price, refunding or replacing to be at our option. All stock is certified, free of insects, scale and disease, it is of the highest quality, thrifty and well grown, insuring success if properly cared for after

HANS PETERSON NURSERY

transplanting in your soil. We can give no guarantee on the life of the stock after it is carefully packed and delivered; however any just complaint will receive our careful consideration.

Terms of Payment

If you are short of money at the time you wish to order, or if you prefer doing business that way, we will book your order any time, provided that you send us one-fourth of the cost of the stock at the time of ordering as a guarantee of good faith, and we will ship the goods C. O. D., you paying for the goods on arrival at your express, postoffice or freight office.

Shipping Season

Our season opens November 15th and continues through the winter and spring.

The Time to Plant

Always bear in mind that South of the Mason and Dixon Line all kinds of trees and plants that we sell can safely be transplanted at any time in the fall, winter or spring. The colder and damper the ground the better, providing of course, that it is not frozen or miry. During the colder months trees and plants or dormant—asleep—and never know they are transplanted. Therefore do all your planting in the winter, or as early in the spring as possible.

Way of Shipping

We ship by freight, express and parcel post. We advise shipping by express as far as possible.

Substitution

Occasionally orders come in for stock of a certain size, and if we should happen to be sold out of that particular size we reserve the right to send the next larger size, but giving the same number of trees without any additional charge.

Special Notice to Quantity Buyers

Large buyers should send list showing number and varieties wanted for special quotation.

SATSUMA ORANGES

The "Kid Glove" orange such wonderful eating! Every year these oranges are becoming more popular. They bear young, a paying crop the fourth year, most wonderful flavor and is ready for the market much earlier than any other orange. They are easy to peel—without getting the juice all over you. Juicy fruit distinctly and deliciously different from any other orange.

The Satsuma produces an income ranging from \$150 to \$1,500 per acre, depending upon the care of the orchard and age of trees. The better the care the bigger the yield.

Being grown in citrus trifoliata; a tree that sheds its leaves in the fall, it stands the cold well, in fact, does better where occasional freezes occur.

The worst enemy the Satsuma has is neglect. Don't plant more than you can give the best of care. Care for your orchard and it will care for you. Prepare this season to plant what Satsumas you can properly care for.

*B. & B.	Size	Age	Each	Ten rate ea	100 rate
"	4 ft.	3 yr.	\$2.00	\$1.75	\$1.50
"	3 ft.	2 yr.	1.15	1.00	.90
"	1 ½ ft.	1 yr.	.60	.50	.40

*Balled and Burlapped.

For bare rooted trees deduct 25 cents each.

We do not recommend planting the 3 yr. size without ball and burlap.

TWO TWIGS OF SATSUMA

GRAPEFRUIT

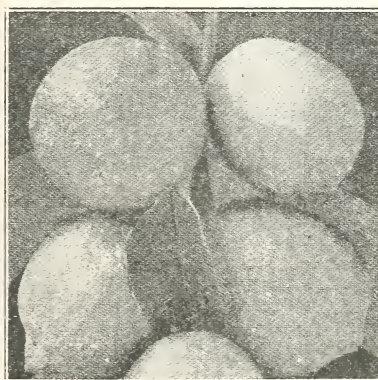

Grapefruit (Marsh Seedless)

Prices Same as Lemon

The grapefruit is today the leader of all citrus fruits. Its consumption has increased faster than the supply. There are several varieties of which the Marsh Seedless is a great favorite in the market. It is nearly seedless. The fruit is very handsome in appearance with smooth yellow skin.

Budded on Citrus Trifoliata.

LEMONS

LEMONS (Commercial)

Balled and Burlapped

Size	Age	Each	10 rate
3 ft.	2 yr.	\$1.50	\$1.25

Bare rooted 25 cents less per tree.

This variety we have had for several years and find it to be the finest flavor and a good seller.

It is a wonder to bear, often bearing two crops in one season. Fruit is medium large, having a few seeds, thin rind and a very fine flavor.

HANS PETERSON NURSERY

KUMQUAT ORANGE

The Kumquat Orange is the smallest of the citrus fruit grown in this country. The bush is an ornamental plant as well as valuable fruit bearer. Fruit makes nice preserves, marmalade and jelly. In a point of hardiness it ranks with the Satsuma. For ornamental and home use, Kumquats are well worth planting. Two varieties: Round Sweet and Oblong.

Balled and Burlapped

Size	Age	Each	10 rate ca.
3 ft	2 yr.	\$1.50	\$1.25
1 ½ ft.	1 yr.	1.00	.75

This tree does not do well without ball and burlap but is preferred without deduct 25 cents each.

PEACHES

Peaches are a leading fruit the world over. The peach tree has to be pruned severely each year. The ordinary life of a peach tree is three or four years, but if it is properly pruned will live many more. A few of these should be planted in every fruit orchard.

MAMIE ROSS

Large, cling and very prolific.

MAYFLOWER

Good for preserving, wonderful flavor and tree is a heavy bearer.

ELBERTA

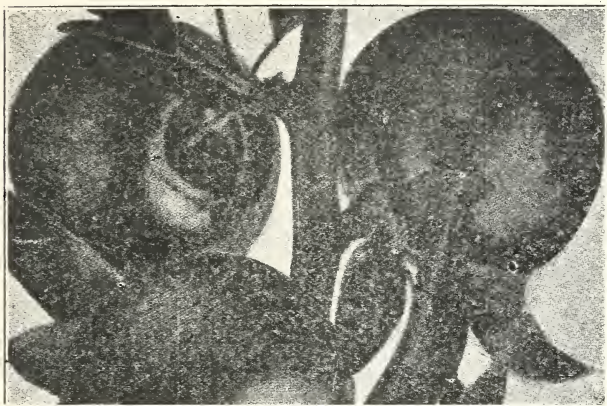

This variety is perhaps the most widely planted of any in America. Best known commercial variety fruit, is large yellow with red cheek, flesh juicy and high flavored.

INDIAN CLING

Large, well colored, red all over, cling. An early bearer.

Size	Each	Ten	Hundred
3 ft.	\$.40	\$3.00	\$27.00

PLUMS

EXCELSIOR PLUM (Natural Size)

Plums are being more extensively planted each year being budded on Marianna plum roots, a native variety adapted to the soil and climate conditions of the gulf coast section. The Japanese varieties crossed with native varieties are heavy annual bearers. These cross-bud varieties have made worthy the attention of the commercial growers as well as for home orchard growing. Of these cross-bud varieties we recommend Excelsior, Nona, Satsuma and Terrell.

EXCELSIOR

This tree is a rapid, vigorous growing and is often so loaded with fruit that the branches must be propped to prevent breaking. Fruit is medium large, nearly round. When full ripe the fruit is almost purplish red. The earliest plum to ripen in Texas.

NONA

Large, dark red, meat yellow, seed separating easily. A well known plum especially adapted to the gulf coast country.

SATSUMA

Large, smokey red, broadly conical, flesh purplish red firm, quality excellent, good for commercial growing.

TERREL

A strong healthy grower, very similar in habit to Excelsior; fruit large, 1½ to 2 inches in diameter, nearly round, beautiful reddish yellow; quality excellent. Recommended as one of the finest plums for the gulf coast country.

Prices Same as Peaches

GRAPES

NIAGARA

Bunch and berry large, greenish yellow, sweet, has a few seed, good quality.

CONCORD

Bunch and berry, very large, blue black, flesh sweet, pulpy, a vigorous grower and a heavy bearer.

AGAWAM

Berries very large, with thick skin; pulp soft; sweet and sprightly; very vigorous, ripens early.

Age	Each	10 rate each
2 yr.	\$.35	\$.30

PEARS

GARBER

Rapid grower, prolific, apple shaped, juicy, and is an excellent pear for table use.

PINEAPPLE (Chinese Sand)

This variety is very highly resistant to pear blight, and known for its resistance to pear blight. This pear is now being more largely planted in the South than all other varieties combined. The fruit is large and handsome, with a pleasing odor somewhat resembling that of the pineapple. The flesh is coarse, comparing favorably in quality with Keiffer.

KEIFFER

Fruit large to very large; yellow with bright vermilion cheek, very handsome; flesh very juicy, brittle, a little coarse but of good quality. Good for preserving.

LECONTE

Fruit large to very large, pyriform; skin smooth, pale yellow; quality good when properly handled. Prices on pears on Japan stocks.

Size	Each	10 rate
3 ft.	\$.40	\$3.50
6 ft.	\$.50	\$4.50

PECANS

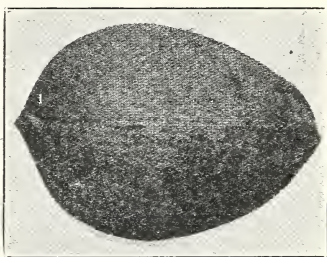

Today the pecan is the most important of all nut bearing trees grown in the United States. There are many varieties of paper shell pecans.

They are an investment to plant on any place, more especially the farm. Farm crops can be grown to advantages among the trees while they are young, and even until the trees have begun to bear well.

Of the many varieties there are, we find the Success, Money-Maker and Stewart to be the leading varieties in production and thrift.

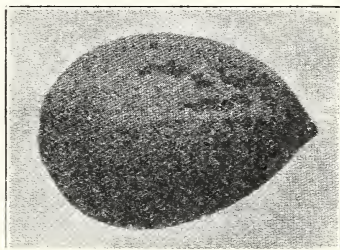

SUCCESS

Large, oblong, tapering to the apex. Shell thin, kernel large, cracking qualities good. The standard of all varieties as a seller and a sure cropper.

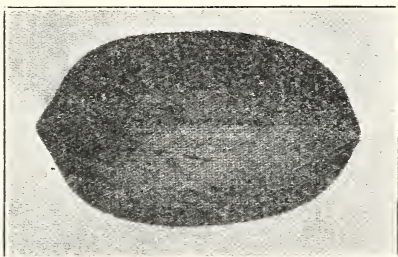

MONEY MAKER

Medium, prolific, shell of medium thickness, cracking easily, full. A heavy bearer and adapted to planting over a large territory.

STEWART

Large to very large, shell slightly thick, kernel plump, flavor excellent. The kernel does not remove from the shell whole as easily as it does some of the other varieties.

Size tops	Each	Ten rate each	100 rate each
4 ft.	\$1.25	\$1.15	\$1.00
6 ft	2.25	2.00	1.75

Picking Satsuma Ora

THIS CROP OF SATSUMAS will average two bushels per tree or two hundred and sixty-eight bushels per acre. The trees are planted 18 feet apart each way, and are different ages from eight to twenty years old. We have been adding to the orchard each year until we have now about twenty acres. They live through the severe freezes better on light sandy loam than on the heavier land.

ages In Our Orchards

It is not to be expected that the trees should bear a full crop each year, because they are often overloaded and the trees will not have many fruits the following season.

The Satsuma is the hardiest orange known; being budded on *Citrus Trifoliata* root. It is being grown commercially farther north than any other orange.

Our trees are propagated from selected bearing trees from our oldest bearing trees that have the smoothest and uniform fruits.

JAPANESE PERSIMMONS

TANE NASHI PERSIMMON

The Japan persimmon has been slowly but steadily gaining in favor. They are a thrifty grower, bear young, and are very ornamental. They thrive on almost any soil, giving good results on land too poor for most crops. Some of them should be planted by every family.

The dropping of partly developed persimmon fruit is because the pastillate flowers of the Japanese persimmon contain no pollen and the dropping of the fruit is due to lack of pollination. After this was found out, a variety which produces pollen-bearing flowers in great abundance was found. In 1915 Glen Saint Mary Nursery introduced a staminate variety under the name Gailey. A few of this variety, at least one in ten, should be planted in every orchard.

GAILEY

Small, dull red, flesh dark about the seed, meaty and firm. This variety is noteworthy for its production of

HANS PETERSON NURSERY

staminate flowers for the pollination of the pistillate flowers of other varieties.

TANE NASHI

This is an outstanding variety, large oblong, seedless, and orange red with yellow flesh. It is the best known and most popular variety grown.

TRIUMPH

Medium, tomato-shaped, red skin, has a few seeds, very productive. Good shipper. The choicest of all varieties.

Size	Each	Ten rate each
4 ft.	\$.50	\$.45
6 ft.	.70	.65

FIGS

CELESTIAL

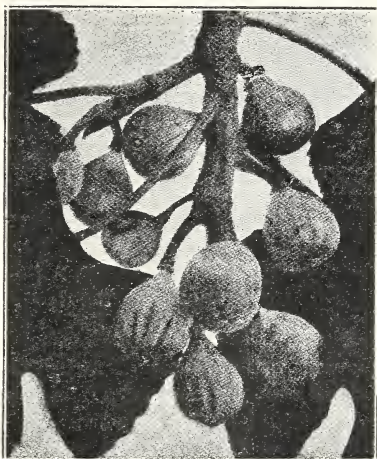

One of the hardiest varieties of figs. Size small to medium, pear shaped, purplish brown, flesh whitish, firm sweet.

LEMON

Fruit medium to large, yellowish green, flesh white, sweet, rather soft, quality fair.

BRUNSWICK

Fruit very large, broadly pear shaped, dark brown in color, pulp thick, soft, quality excellent.

CELESTIAL FIG

ROSES

HARDY ROSES

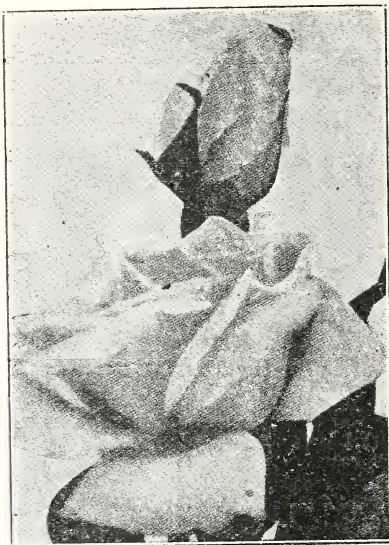

Field Grown

As long as the field rose exists it will retain its dominant grip upon the affections and appreciation of the human race.

Our rose bushes are two year, hardy field plants, full of vigor. Strong roots and strong tops make for better blooms and more of them.

RED ROSES

Red Radiance. Bush
Stands among red roses without a superior. Flowers are of exquisite form, sweet, color a

LADY HILLINGDON ROSE

deep rich red which does not readily fade. It is a strong grower and the most popular variety of all the red roses. The stems are ~~not~~ making it very valuable for cut flowers.

RED METEOR, Bush

A velvetyred, free bloomer.

PINK ROSES

PINK RADIANCE, Bush

The finest pink rose we know. No discription can do it justice. The buds are rather rounded, the flower cup-shaped, a beautiful shade of soft carmine pink, deeper on the outside than on the inside of the petals, large and sweet scented. As a cut flower it has no superior. It is a strong grower; and has a reputation for its self where ever tried.

SHELL PINK RADIANCE, Bush

A sport from Radiance with the same vigorous growth and free blooming habit. In color it is shell pink with

HANS PETERSON NURSERY

salmon shading at the base of the petals. It is just as fine a rose as the red and pink Radiance and its color makes it very lovely.

COLUMBIA, Bush

A beautiful, true deep pink which is enduring, large size, very fragrant.

YELLOW ROSES

LADY HILLINGDON, Bush

Deep yellow to orange, a thrifty free flowering variety, is noted for its long buds.

SUNBURST, Bush

Very select, with long spiral buds; a lovely bronzy-yellow fading to apricot.

LUXEMBURG, Bush

A fine, large, fully double rose of vigorous branching habit, an unusual freedom for color which is a rich golden yellow.

MARECHAL NEAL, Climbing

Perhaps the most famous and most widely known rose in the South. The flowers are double, a wonderful shade of clear deep yellow. Very fragrant.

WHITE ROSES

FRU KARL DRUSCHKI, Climbing

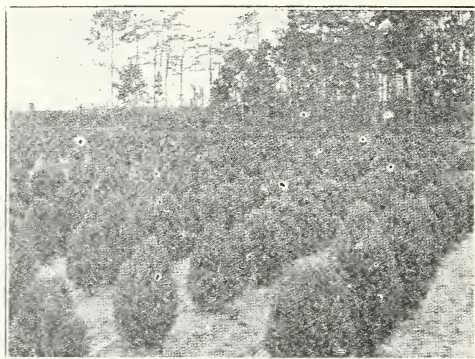

The White American Beauty, buds fine and large, white but sometimes shaded pink on outer petals. The open flowers are of great size and showing a cluster of deep yellow stamens at the center. A very strong growing rose and blooms freely throughout the year. Although it is a climber it does well trimmed to a bush.

LARGE 2 YEAR NO. 1 EACH \$.50, DOZEN \$5.00

CHOCOLATE BAYOU, TEXAS

EVERGREENS

ROSEDALE ARBORVITAE

This has a fine feathery foliage, perfect uniform shape of compact, rounded symmetrical form, with very dense head.

The foliage is dark bluish green and very handsome.

Size	Each	Ten rate each
1 ½ ft.	\$1.00	\$.90
2 ½ ft.	2.00	1.75

EUONYMOUS JAPONICUS

Round dark green glossy leaves. Thrives in shady places. Beautiful for low hedge around low porch or along driveway. Can be pruned to any shape.

Two Feet, \$1.00 each, Ten rate each \$.90

CHOCOLATE BAYOU, TEXAS

HANS PETERSON NURSERY

PALMS

Washingtonia Robusta. A splendid palm with dark green fan-shaped leaves; hardy, well adapted to the gulf coast country. It is a rapid grower and reaches a height of from 50 to 80 feet. One of the finest for landscape planting and for tropical scenery.

PHOENIX CANARIENSIS

A stately palm, with large trunk and large pinnate, gracefully curved leaves. A rapid grower; very hardy and one of the best for outdoor planting in the gulf coast country.

2 Ft. ea. \$1.75; Ten \$15.00; 4 Ft. ea. \$3.50; Ten \$30.00

RED CEDAR

A good bush for planting for windbreak around your orchard, it is not apt to make a breeding place for insects or disease that might be injurious to the blossoms and fruit. It makes a dense growth from the ground up that wind cannot penetrate, and is not easily damaged by heavy wind nor broken by ice or sleet. They should be planted eight feet apart in a double row around the orchard.

Balled and Burlapped
